

## White shirt collar fusing interlining fabric woven fabric 50gsm 200gsm

### Our Product Introduction

#### Basic Information

- Place of Origin: Zhejiang, China (Mainland)
- Brand Name: ZHONGQIANG
- Minimum Order Quantity: Negotiation
- Price: Negotiation
- Packaging Details: Packaged in Plastic Bags
- Delivery Time: 3-10 days
- Payment Terms: T/T
- Supply Ability: 100,000m monthly

#### Product Specification

- Product Name: Shirt Collar Interlining
- Adhesive: Hot-melt, Resin, Etc.
- Color: White, Black, Grey, Etc.
- Function: Breathable, Waterproof, Etc.
- Hand Feel: Soft, Hard, Etc.
- Material: Woven Fabrics non-woven Fabrics
- Usage: Garment, Shoes, Bags, Etc.
- Weight: 50gsm-200gsm
- Width: 90cm-150cm
- Highlight: **Shirt Collar Interlining 50gsm,  
shirt collar fusing interlining 200gsm,  
collar interlining**

## Product Description

White Shirt Collar Interlining collar fabric woven fabric

### Shirt Collar Interlining

Shirt collar interlining, also known as collar canvas or collar interfacing, is a layer of material inserted between the outer fabric layers of a shirt collar to provide structure, shape, and stability. It helps the collar maintain its shape and crispness while providing support and reinforcement.

**Thickness and Weight:** The choice of collar interlining thickness and weight depends on the desired level of stiffness and structure. Lighter interlinings are used for softer and more casual collar styles, while heavier interlinings are used for more formal and structured collar styles.

**Fusible vs. Sew-in:** Collar interlinings can be either fusible or sew-in. Fusible interlinings have adhesive on one side, which can be activated with heat to adhere to the fabric. Sew-in interlinings are stitched in place during the collar construction process. Fusible interlinings offer convenience and ease of application, while sew-in interlinings provide more customization and flexibility.

**Care and Maintenance:** The care and maintenance of a shirt with collar interlining depend on the type of interlining used. Fusible interlinings may have specific care instructions, and it is essential to follow them to maintain the integrity of the interlining. Generally, collars with interlining should be handled with care during washing, ironing, and storage to prevent damage to the interlining layer.

Aspect	Description
Purpose	Provides structure and shape to the shirt collar
Material	Typically made of woven fabric or fusible interfacing
Placement	Inserted between the outer fabric layers of the collar
Thickness	Varies depending on the desired stiffness and structure
Types	Woven fabric interlining, non-woven fabric interlining, fusible interfacing
Application Method	Sewn or fused to the collar fabric
Benefits	Maintains collar shape, prevents collapsing or curling
Care	Follow specific care instructions, avoid excessive heat
Common Usage	Shirts, blouses, dress shirts, formal and casual wear
